Rénui Exfoliating Scrub

Microdermabrasion machine

Peptide Factor 20

A-Stem Factor

Prolite Serum

Algae Masque

HyDro Moisturizer

Bonjour Eye Cream

Sunscreen SPF 30+

1. Cleanse the skin with Green Tea Wash and rinse.
2. Prepare the skin with Refining Toner with a cotton pad and allow the skin to dry. Some patients may experience a sting/tingling sensation; Ask them on the comfort scale from 1 to 10 how they feel.
3. Take one (1) of the GA pads and apply it with medium pressure to the area. Allow it to penetrate for 3-4 minutes, then neutralize with temperate water or a wet towel.
4. Dry the skin well prior to microdermabrasion. When dry, use the microdermabrasion machine to thoroughly remove dead skin cells without compromising the integrity of the skin.
5. If no microdermabrasion machine is present, apply Rénuï Exfoliating Scrub gently in circular motion for 2-3 minutes. Rinse thoroughly.
6. Apply Refining Toner with a cotton pad and allow the skin to dry.
7. Apply Peptide Factor 20 to the area. This serum helps reduce redness and generate new collagen, hyaluronic acid and elastin.
8. Apply A-Stem Factor over the area to help combat the visible signs of aging. For lightening, use Prolite Serum to improve skin tone uniformity. Allow the serums to dry.
9. Apply C&E Factor over the area prior to the Algae Masque.
10. Apply and even layer of the Algae Masque. Leave it on for 15 minutes and then remove with a moistened cotton pad or warm towel.
11. Apply Refining Toner with a cotton pad and allow the skin to dry.
12. Apply Hydro Moisturizer to calm, hydrate and protect the skin.
13. Apply Sunscreen Moisturizer SPF 30+ for UVA and UVB protection.
